

AUTOMATISATION IN FOOD PACKAGING:

Our PREMIUMflow is an EVOH based shrink film for any type of horizontal FFS machine, dedicated for shrink film applications. The film is quickly formed around the product on the machine, vacuumed and sealed on a vacuum belt machine followed by an automatic shrink tunnel.

This way, our customer in Russia increased the efficiency of his production process and gained cost advantages through the reduction of manual labor work. Pictured here: pieces of ham packed in our PREMIUMflow film on a Flow-bag machine.
