

***SYMIC C393 - As brilliant
as the sun itself***

ECKART is expanding its SYMIC C393 product range by adding a new highly chromatic gold shade. This innovative and versatile pigment boasts outstanding visual appeal and is impressive on account of its high light refraction and its reflectiveness. This unique look is created by a combination of premium synthetic sheet silicate and the innovative coating technology with customised metal oxides. This type of production ensures exceptional color purity and brilliance and lends the product real color depth, gloss that's as brilliant as the sun and, of course, a hint of sparkle. Just like all products in the SYMIC range, the new gold pigment can be used for an array of applications, for instance packaging in the cosmetics and food industries, as well as for numerous other decorative purposes
